01. Max subarray sum of $\text{len} = k$

03. Spiral matrix

Q1. Given N elements, print max subarray sum of length ' k '.

arr [10] =

-3	4	-2	5	3	-2	8	2	-1	4
0	1	2	3	4	5	6	7	8	9

k=5

Quiz → End index of first window $\Rightarrow k-1$
st index of first window = 0

Quiz End index of last window = $n-1$

st	end	sum
0	4	7
1	5	8
2	6	12
3	7	16
4	8	10
5	9	11

$$02. \quad A = \{ -3, 5, -1, 1 \}$$

0 1 2 3

K=2

st	end	sum
0	1	2
1	2	4 → Ans
2	3	0

Brute force → For every subarray of size K, calculate the sum & update our maximum accordingly

```
int maxsub ( int [] ar , int k )
```

```

int st=0    e=k-1    ans = -∞
while (e < n) {
    int sum=0
    for( int i=st ; i ≤ e ; i++ ) {
        sum = sum + ar[i];
    }
    if ( sum > ans ) ans = sum
    st = st + 1;   e = e + 1;
}

```

$$K=2 \longrightarrow \text{ans} = 5 \text{ or } n-1 = n-2+1$$

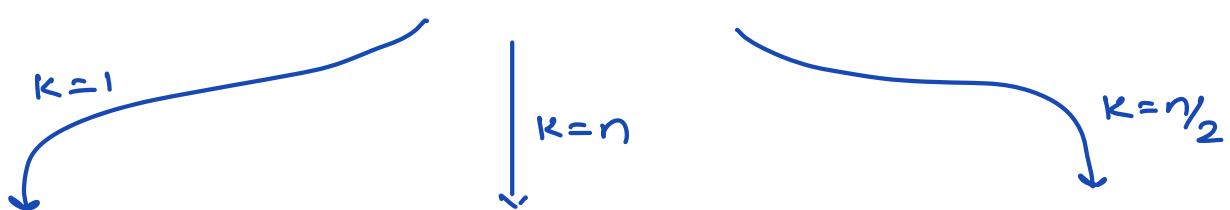

$$K=3 \longrightarrow \text{ans} = 4 \text{ or } n-2 = n-3+1$$

⋮

$$= K \rightarrow \text{ans} = n-k+1 \text{ subarrays}$$

Idea 2 → Use prefix sum approach

```
int maxsub ( int [ ] ar , int k )
```

Create psum array {TODO} → n

int st=0 e=k-1 ans = -∞

while (e < n) {

 if (st==0) sum = pref[e];

 else sum = Pf[e] - Pf[st-1];

 if (sum > ans) ans = sum

 st = st + 1; e = e + 1;

$$8 = 7 - \text{arr}[0] + \text{arr}[5]$$

$$= 7 - (-3) + (-2) = 8$$

$$12 = 8 - \text{arr}[1] + \text{arr}[6]$$

$$= 8 - 4 + 8$$

$$16 = 12 - \text{arr}[2] + \text{arr}[7]$$

Q2. Given arr[N] & a number B. Find & return the minimum no. of swaps to bring all the numbers $\leq B$ together (Google)
